EDUCATION

Purdue University Fort Wayne <i>Master of Science in Computer Science (GPA: 4.0/4.0)</i> Relevant Coursework: Software Project Management, Management of Information Technology, Full Stack Web Dev, Human-Computer Interaction, Low-Code/No-Code Rapid Prototyping, Applications of Deep Learning	Fort Wayne, IN, USA <i>Aug 2024 – May 2026</i>
American University of Sharjah (AUS) <i>Bachelor of Science in Computer Engineering</i>	Sharjah, UAE <i>Aug 2020 – Dec 2023</i>

EXPERIENCE

City of Fort Wayne, City Utilities Engineering <i>Computer Science Intern</i> - Built and overhauled a Python/Tkinter desktop application for field asset data entry end to end, gathering requirements directly from field engineering staff and redesigning the UI around their operational workflow. - Developed and improved a spatial GIS chatbot through prompt design, feature implementation, code refinement, and end-to-end testing prior to integration. - Led research on GIS infrastructure data policy and simplified complex legal and technical requirements into a clear 3-tier classification model, which was adopted for public data-sharing decisions. - Built Power Automate workflows to streamline internal engineering processes, reducing manual steps in team documentation and reporting tasks.	Fort Wayne, IN, USA <i>June 2026 – Present</i>
ForOurLastNames (FinTech Startup) <i>Full-Stack Software Engineering Intern</i> - Owned end-to-end delivery of 9 client-facing React + TypeScript features for a live financial services product, from requirements through implementation, testing, and release. - Resolved 4 critical UI/UX and responsive layout issues, improving cross-device usability for end users managing their finances. - Implemented automated frontend tests with Playwright, covering edge cases to reduce manual QA and improve release reliability. - Partnered closely with QA and a cross-functional Agile team on scope estimation, code review, and sprint delivery, moving fast with high acceptance rates.	Tulsa, OK, USA <i>June 2025 – August 2025</i>
Schneider Electric <i>Process Automation Intern</i> - Developed an internal automation prototype in Python/Tkinter to replace spreadsheet-heavy procurement workflows, improving data consistency through structured input flows. - Reiterated the app design multiple times to accommodate constantly changing requirements from stakeholders, adapting the tool's workflow as procurement needs evolved.	Dubai, UAE <i>June 2024 – July 2024</i>

PROJECTS

Crescendo Coffee & Café Redesign — <i>Figma, PRD, Product Discovery, React, TypeScript</i> - Authored an end-to-end Product Requirements Document (PRD) and UX audit for a live business; defined 2 target personas, identified key usability friction points, and structured a MoSCoW-prioritized, 3-phase roadmap. - Evaluated 8 wireframe concepts across homepage and checkout flows, balancing tradeoffs such as conversion speed for repeat customers versus brand storytelling for new visitors. - Developed an interactive high-fidelity prototype in React and TypeScript to validate the revised ordering experience, reducing friction in mobile checkout.	2026
MastodonHub — <i>React, Django, Jest, Jira, Bitbucket</i> - Managed work as tickets in Jira and Bitbucket as part of a rotating team lead structure; reviewed and approved merge requests checking edge cases, while scoping tasks and raising PRs as a contributor, keeping the team's sprint velocity on track. - Collaborated across frontend and backend (React/Django) to keep sprint work well-scoped and unblocked, writing Jest tests that contributed to the team's 45% frontend and 95%+ backend test coverage milestones.	2025
SyllabusSync — <i>TypeScript, React, Next.js, Google Gemini API, Vercel</i> Identified a recurring user pain point and built a full-stack TypeScript app end to end, integrating Google Gemini API to automate syllabus-to-calendar conversion; shipped live to production on Vercel.	2025
CampusMart — <i>React, Node.js, Express.js, MongoDB, Vercel</i> Built an e-commerce app end to end: designed MongoDB data schema, built RESTful APIs with Node.js/Express, and created modular React components for listings and browsing.	2024

TECHNICAL AND PRODUCT SKILLS

Product & Management: Jira, Figma, Confluence, Product Requirements Documents (PRDs), UX Research, User Discovery, Requirements Gathering, Agile/Scrum, MoSCoW Prioritization, Wireframing, Tradeoff Analysis
Languages & Frameworks: JavaScript, TypeScript, Python, React, Next.js, Node.js/Express, Django, SQL, MongoDB, REST APIs
Tools & AI: Trello, Bitbucket, Git/GitHub, Playwright, Jest, Cypress, Power Automate, Google Gemini API, Cursor, Copilot

LEADERSHIP & COMMUNITY

Python Bootcamp Instructor: Owned curriculum design and delivery end to end for a 2-day program, leading non-technical business and finance students through data analysis and automation fundamentals using Python.
AUS Community Outreach Volunteer: Distributed food/water to workers in Sharjah and supported fundraising campaigns for the Ghana Classroom Campaign.
